The risk indicator was calculated using historical data and may not be a reliable indication of the future risk profile of the Fund. The risk category shown is not guaranteed and may change over time. The lowest category does not mean 'risk-free'.

This Fund is in category 6 because it invests in equities of European companies, which are subject to higher than average price fluctuations. The Fund uses a long/short strategy to achieve a stable return, but it may not fully benefit in strongly rising markets.

Other material risks:

- European Equities Risk: the Fund invests in European companies and share prices can rise or fall due to a number of factors affecting global stock markets.
- Derivative Risk: the use of derivatives may result in gains or losses for the Fund that are greater than the amount invested by it as well as introducing leverage which may lead to greater fluctuations in the net asset value of the Fund. Derivatives also

involve counterparty risk.

- Counterparty Risk: the risk to each party of a contract that the other party will not meet its contractual obligations. The failure of a counterparty or an issuer of a financial instrument held within the Fund to meet its payment obligations would have a negative impact on the Fund.
- Operational Risk: material losses to the Fund may arise as a result of human error, system and/or process failures, inadequate procedures or controls.
- Currency Risk: the Fund invests in securities denominated in currencies other than the Fund's base currency. Changes in exchange rates may lead to fluctuations in the value of your investment.
